

**STRUT
ENGINEERING**

**COMPANY
PROFILE**

2025

About Our **Company**

Strut Engineering Plc was established in 2015 with focus on giving engineering solutions for building design. The company main objective and specialization was on structural design of buildings, factories, stadiums, culverts and bridges. Among our team members who have a vast experience with diverse set of skill and knowledge in project management, coordination, planning, supervision, purchasing and quality control that serve our customers best interest. we work tirelessly to ensure timely completion of projects without compromising time and agreed project budget

Vision

Strut Engineering Plc has been established with the vision to bridge the gap in the demand of various architectural and engineering design solutions in structural, electrical, mechanical and plumbing services in Ethiopia.

Mission

To make a difference and bridge the gap in the market our company has enough and able professionals for the projects. Adequate staff with the extensive experience will be employed and adequate trainings are provided.

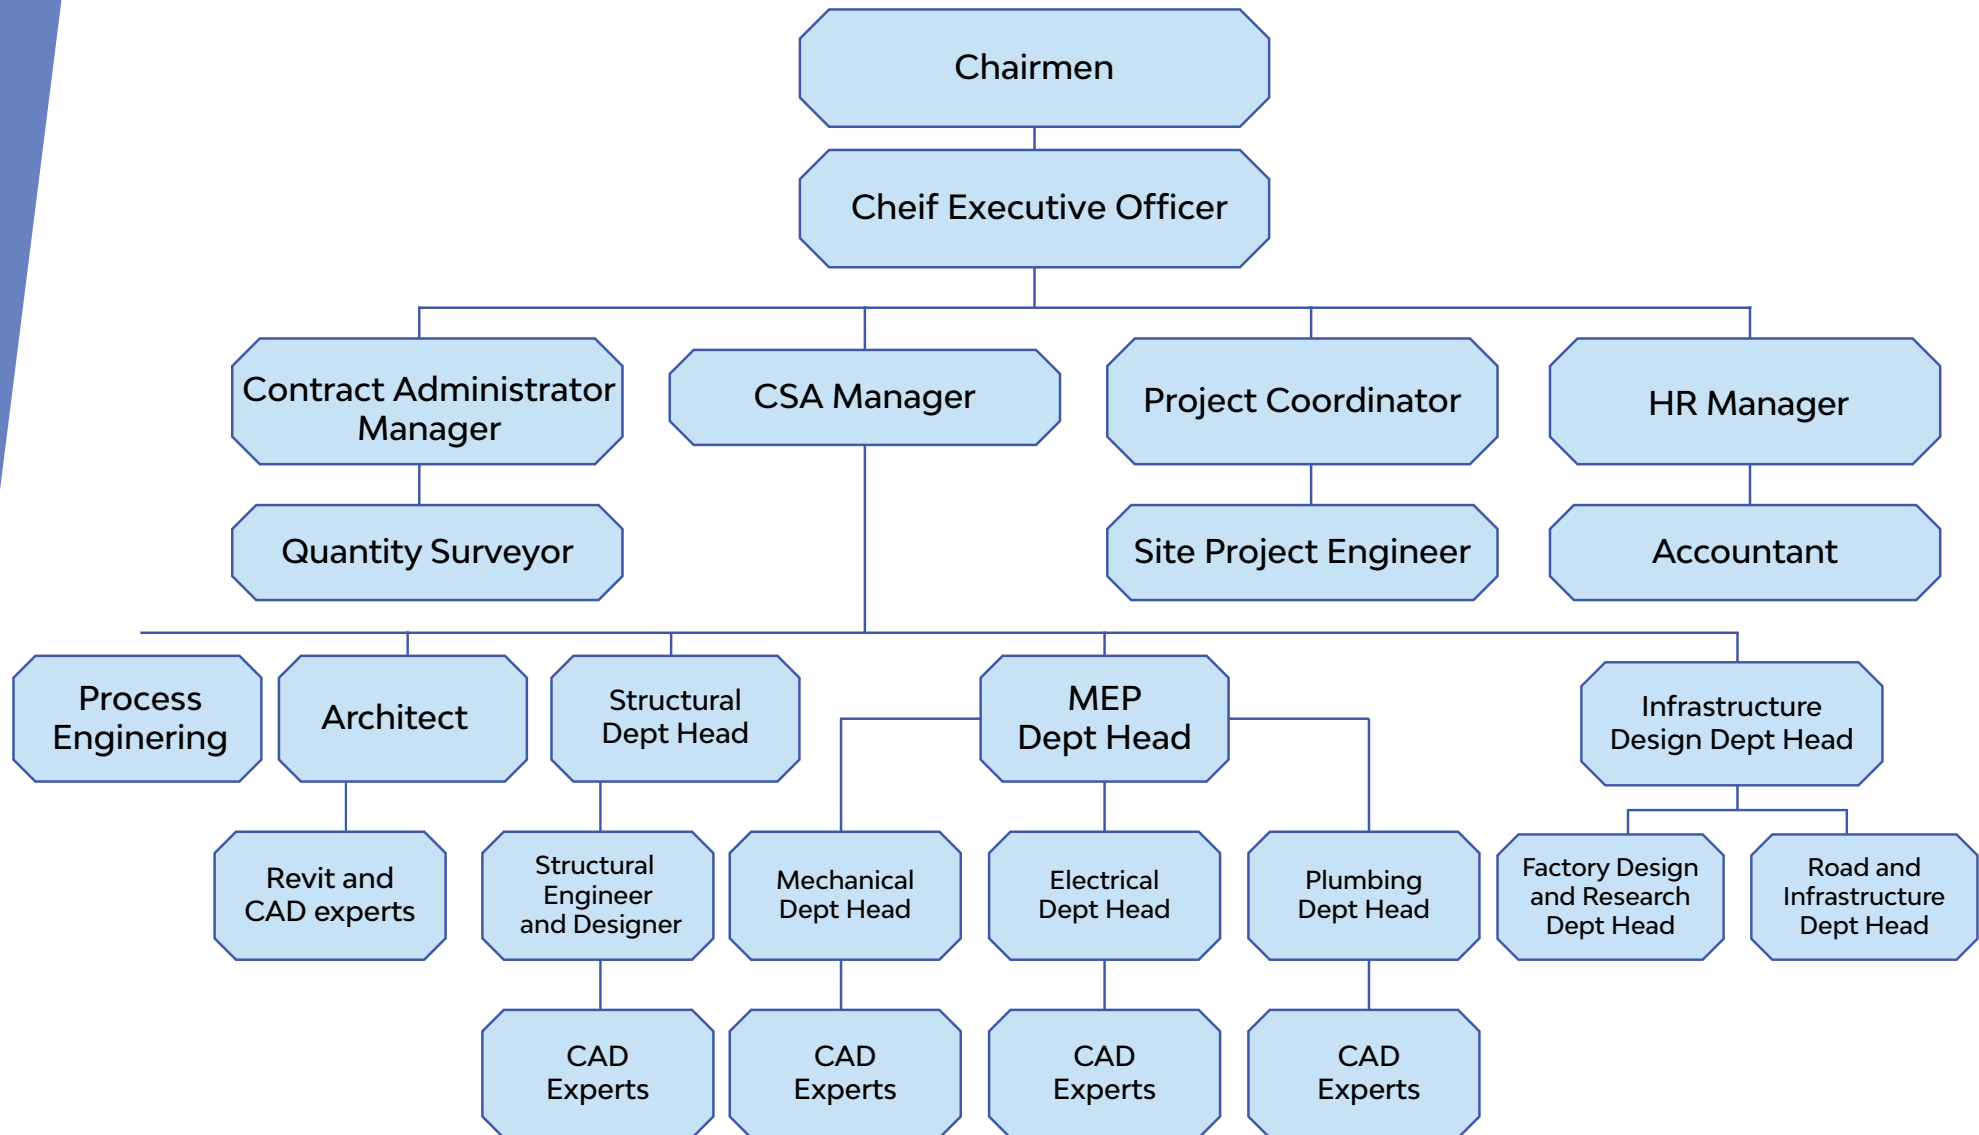

Our company also uses state of the art software and computers to reduce the work time and deliver the projects in the expected delivery time to our client.

Adequate use of building code standards will be applied to the design of all projects as per the demand of the country.

To provide value added service which will save time and cost to our customers by using the right amount of resource and knowledge that is widely available within our team.

STRUT ENGINEERING PLC

Organizational Chart

FIRM GENERAL **INFORMATION**

Ownership:
Sofonias Berih

Company Name:
Strut Engineering

Tax identification Number (TIN):
0045464210

Vat Registration Number:
9796410010

Number of Employees
24 Employees

Architectural and Landscape Design

Architectural design services involve creating detailed plans and specifications for buildings and structures. This includes:

Conceptual Design: Initial sketches and ideas to visualize the project.

Schematic Design: More detailed drawings and plans to outline the structure.

Design Development: Refining the design, selecting materials, and finalizing details.

Construction Documents: Detailed drawings and specifications for construction.

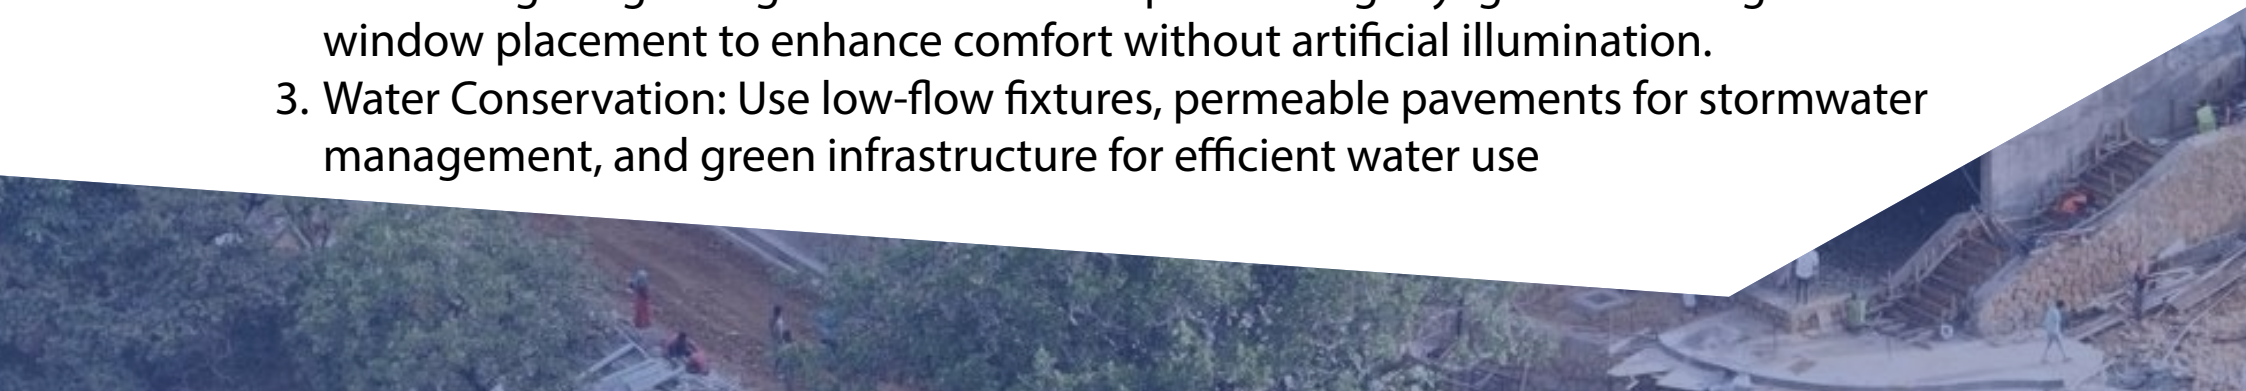

The Society

Integrating society into architectural design for high-density projects involves a multi-disciplinary approach that considers community aspects such as accessibility, cultural sensitivity, environmental impact, and smart technologies. By addressing these elements, architects can create buildings that are not only functional but also inclusive and supportive of social dynamics, fostering a sense of belonging among residents in urban environments.

The Environment

Understanding the key environmental factors that influence architecture, such as energy efficiency, natural lighting, water conservation, and cultural considerations.

1. **Energy Efficiency:** Incorporate sustainable materials and renewable energy sources like solar panels or wind turbines.
2. **Natural Lighting:** Design well-ventilated spaces using skylights or strategic window placement to enhance comfort without artificial illumination.
3. **Water Conservation:** Use low-flow fixtures, permeable pavements for stormwater management, and green infrastructure for efficient water use

Structural Engineering Design

1. *Structural Engineering Design*

The mastery that you can find at Strut Engineering is its specialization in structural engineering. Our company has been engaged in structural engineering of over 300 projects all over Ethiopia and including some of the tallest building as well as the biggest stadium projects.

Strut Engineering specializes in the following types of Structural Design project

1. Reinforced Concrete Design.
2. Pile Foundation Design.
3. Shoring Design.
4. Offshore Foundation Design.
5. Steel Structure Design for Warehouse.
6. Steel Structure design for Buildings.
7. Composite Structural Design for Buildings.
8. Earthquake Design for Both Steel and Concrete Buildings.
9. Machine Foundation Design for Different Type of Factories.

Strut Engineering Implements state of the Art of Softwares for the Buildings, Bridges, Steel Structure, Machine Foundation and Pile foundation for shoring and foundation design.

Infrastructure Engineering Design

Infrastructure engineering design involves the planning, analyzing, and designing of large-scale civil engineering projects such as roads, bridges, tunnels, dams, water supply systems, and water treatment. The scope of infrastructure engineering design typically includes defining project objectives, analyzing site conditions, designing structural components, ensuring compliance with standards and regulations, and delivering high-quality engineering solutions

1. Internal Road Design

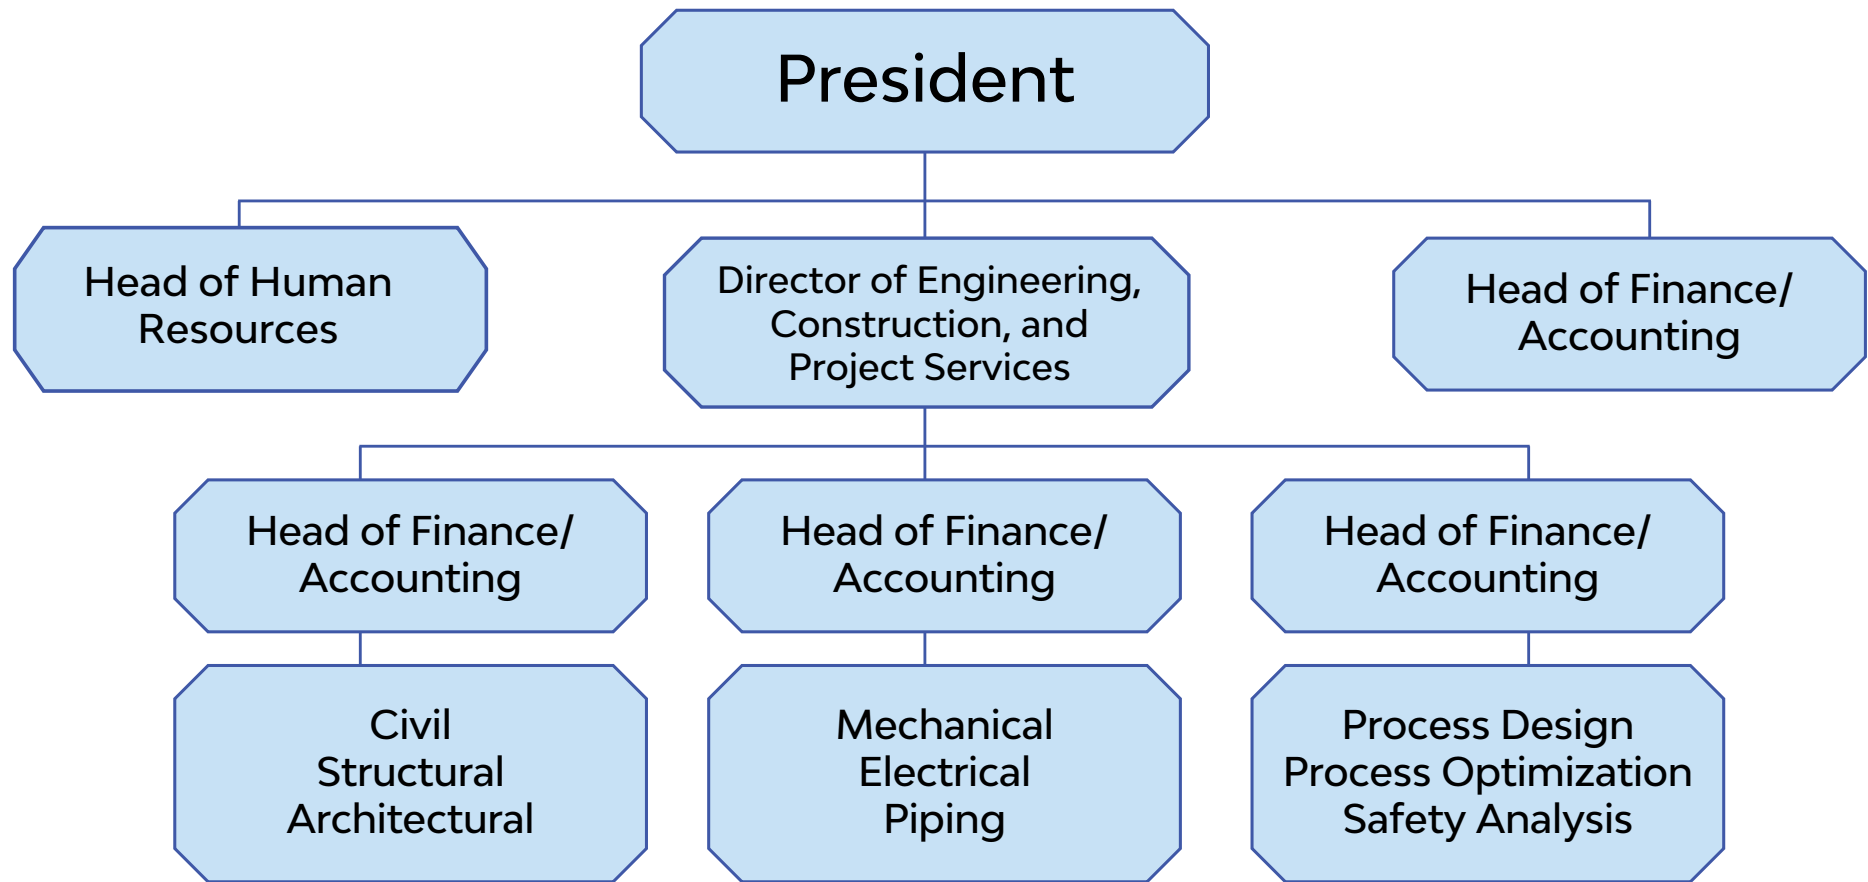

The design scope of an internal road in a building involves multiple considerations to ensure functionality, safety, comfort, and aesthetics including Layout Planning, Safety Considerations, Comfort, Accessibility, Aesthetics, Environmental Impact, Alignment Planning and Cost Estimation. This comprehensive approach ensures that internal roads are functional, safe, comfortable, and aesthetically pleasing while adhering to necessary regulations.

2. Waste Water Infrastructure and treatment plant design

The design scope of a wastewater infrastructure and treatment plant encompasses various aspects, from initial planning to long-term maintenance including Environmental Assessment, Treatment System Design, Infrastructure Planning, Maintenance and Operations, Scalability and Future Expansion and Energy Considerations as well as surrounding communities integration. In summary, designing a wastewater infrastructure and treatment plant is a comprehensive endeavor requiring careful planning across multiple disciplines to ensure efficiency, environmental sustainability, and public acceptability

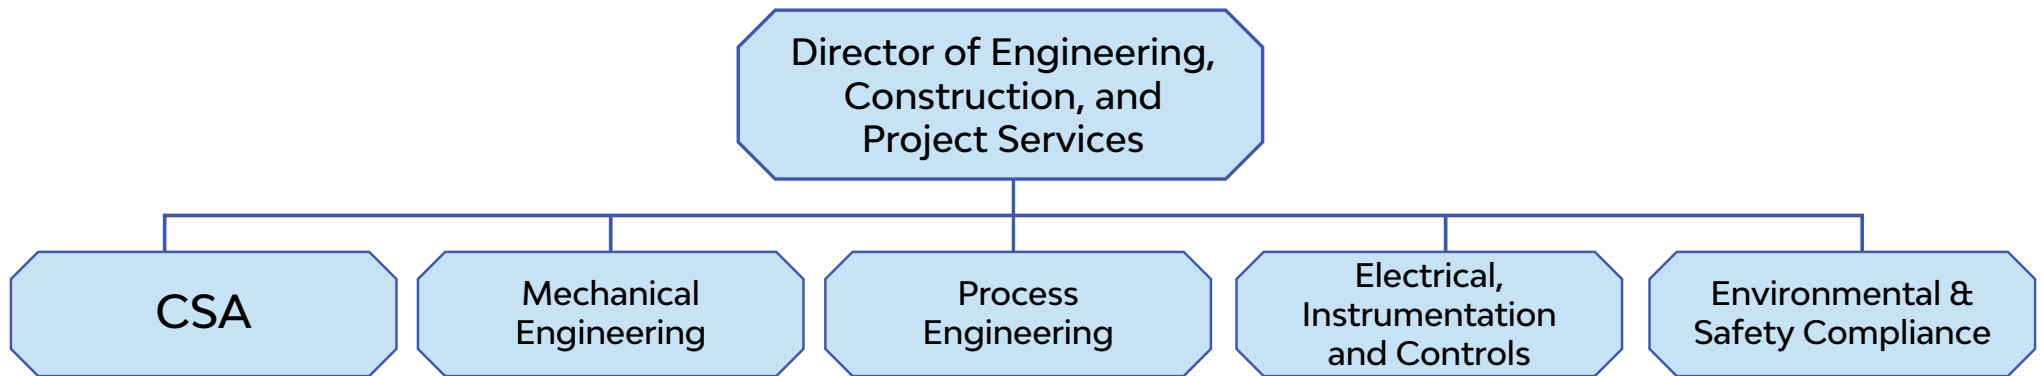

3. Factory Design and Implementation

Factory Design and Implementation Scope involves a comprehensive approach to ensure the factory operates efficiently, safely, and profitably.

Industrial Engineering Services

This division supports process-intensive industries such as oil & gas, chemical plants, water treatment, manufacturing, and food processing facilities. The focus is on productivity, safety, and system optimization.

Civil, Structural and Architectural (CSA)

Industrial Foundations for Equipment

Deep and Shallow Foundation Design

Containment Design

Analysis and Modification of Existing Steel and Concrete Structures for New Process Installation

Steel Structures and Pipe Racks

Platform and Mezzanine Design

Access & Safety Structures (Ladders, Railings, Catwalks)

Grading and Drainage Plan

Truck Loading and Unloading Facility Design

Process Engineering

PFD/P&ID Development

Process Simulation and Optimization

Hazard and Operability Studies (HAZOP)

Material and Energy Balances

Equipment Sizing

Piping Network Hydraulic Studies

Process Flow Diagrams

Relief System Design & Studies

Alternatives Analysis

Debottlenecking Studies

Mechanical Engineering

Fitness for Service

Stress Analysis

Finite Element Analysis

Vessel & Exchanger Re-rates

Pressure Vessel Analysis

Piping Design and Drafting
3D Modeling, Construction Drawings

Rotating Equipment Analysis (Level 3)

Failure Analysis

Bolt Torquing Procedures

Design Lifting Systems

Emergency/TAR Response Support

Vendor Surveillance

Tank Reliability & Troubleshooting

Electrical, Instrumentation & Controls

Power Distribution for Plants

PLC/DCS Programming

Instrumentation Sizing and Selection

Control Panel Design and Wiring Diagrams

SCADA System Integration

Environmental & Safety Compliance

Air/Water Emissions Reporting

OSHA Compliance and Facility Layouts

Process Safety Management (PSM)

MEP Engineering Design

A MEP project encompasses the planning, design, installation, testing, commissioning, and maintenance of systems that support the building's operation. The scope can vary depending on the type of building (e.g., residential, commercial, industrial) and its specific requirements. Here's a breakdown of the typical scope:

1. Mechanical Design

- Heating, cooling, water supply, and sanitation.
- Elevators, escalators, and fire safety systems.
- Air conditioning and refrigeration systems.

2. Electrical Design

- Lighting design and control.
- Power distribution and control panels.
- Motor drives and control panels.
- Circuit protection (fuses, circuit breakers) and sub panel boards.

3. Plumbing Design

- Water supply, sanitation, and drainage.
- Pressure washing systems.
- Water treatment, recycling, and distribution.

Contract Administration and Site Supervision

Contract Administration

The scope of "contract administration and site supervision" encompasses critical aspects of project management, particularly in construction, real estate, or similar fields. It involves managing contracts and overseeing physical sites to ensure operational efficiency and compliance with regulations.

1. Understanding Contracts:

Comprehensively understanding all terms, conditions, and details of the contracts.

2. Negotiation:

Facilitating negotiations to ensure fair terms for both parties involved.

3. Monitoring and Management:

Actively monitoring contracts throughout their lifecycle to address any changes or issues promptly. Providing Weekly and Monthly report for various projects.

Site Supervision

1. Construction Operations:

Overseeing construction processes from planning to completion.

2. Quality Control:

Implementing systems to ensure work meets quality and safety standards.

3. Team Coordination:

Managing and coordinating teams effectively to ensure smooth operations on-site

High Density **Apartment Projects**

We provide our clients with a broad range of professional architectural design and construction management services tailored to fit their specific needs. High-density residential apartment projects represent a blend of modern architecture, urban planning, and smart technology aimed at meeting the growing demand for compact living in cities. By focusing on efficiency, sustainability, and community well-being, these developments offer residents a lifestyle that balances individual needs with shared resources, all while operating within the constraints of dense urban environments.

Our office has a vast experience in the design of apartment project with as developments aim to accommodate a large number of residents within a limited geographical area, often through multi-floor buildings with multiple units per building.

Our company as worked with various real estate and governemt organizations tostudy and understand the demand of the current enviroment and has developed effecient systems both from functions and structural systems so that the client can get the best output and compete in the current market.

PROJECTS

Full Design Projects

1.Ato Tquabo 2B+G+ 14 Mixed Use Building Project.

A.The project is located in Addis Ababa and is a mixed use building project were by the client wanted to have a 90 apartment block on a total area of 1600 square meters area.

2.Bigeta Mixed B+G+11 Mixed Use Building Project.

3.Levi Plaza Real Estate 4B+G+ 15 Mixed Use Building Project.

4.Fellege Ghion Resort Hotel

A.This project is located in BahirDar and is a 5 Star Hotel project which will be part of the Gebetta Lehager project.

5.Addis Ababa City Design and Construction Bureau for Ethiopian Orthodox Church building project which is a B+G+5 Mixed use Building project.

6.Kab Real Estate One Member Plc Building design project for B+G+6 project.

PROJECTS

Structural Design Projects

1. Gebeta Lehager project in Gorgora.

A. Our office has done the full structural design for the project with a total cost of 1.2 Billion birr where by the use of different type of structural design solutions were developed. the structure that were built were inside the Great Tana Lake in Gondar area where our design office worked in the structural and foundation solution for Port and large floor spans to adhere to the client request.

2. Value Real Estate project for Century Addis Real Estate

A. Our office worked in partner with Azad Plc for the structural design of a large shopping complex in the center of Addis Ababa resting on a total area of 6,000 square meters where by the structure has five basements and 24 storeys above ground.

PROJECTS

Structural Design Projects

3. City Center Real Estate (4B+G+18) Mixed Use project.

4. A Vision Trading Plc

A Five star Hotel Project right in the center of Addis Ababa with a 3B + G + 27 project. The project rests on a total area of 7,500 square meters area with various functions in the building including convention centers, shops, business area as well as restaurants with a Helipad on the roof.

5. Grand View Addis Real Estate

The project rests on a total area of 7,000 square meters area with a basement area that will serve as parking and utilities area. The project has three different blocks resting on a total of 2,100 square meters rising from the basement level and extending up to 16 storeys in height above the basement level.

PROJECTS

Structural Design Projects

6. Minaye Plc

- a. MAP 6 (2B+G+20) Mixed use Building project.
- b. MAP 7 (2B+G+16) Mixed Use Building project.
- c. MAP 3 (3B+G+20) Mixed Use Building project.

7. Gebeta LeTewlede (Sofumer Resort Hotel) in partner with CCCC contractor.

8. Ene Liya Tquabo Bole (B+G+10) Mixed Use Building Project.

9. Yirgalem Textile Real Estate Development project.

This project rests on a total area of 16,000 square meters at the center of Addis Ababa. The project has a commercial and apartment complex with the commercial area is a B+G+7 middle rise building and the apartment complex is a B+G+15 apartment project
